

LCAI Web Updates 10.09.26

Based on the **revised September 28 Website Audit**, these are the changes I (CV) would prioritize.

1. CRITICAL — Correct the token transferability and network disclosures

Page: <https://lightchain.ai/risk-disclosures>

The page still describes LCAI as nontransferable, governance-only, and operating solely on Ethereum. It also gives a 1% governance quorum. These statements conflict with other current official materials. lightchain.ai

Replace the **nontransferability section**, including its heading, with:

Token Transfers and Market Risks

LCAI can be transferred and traded through supported networks and available markets. Trading availability, liquidity, and price are not guaranteed. Transfers to an incorrect address or unsupported network may result in permanent loss.

Replace the **Ethereum-only blockchain risk section** with:

Blockchain and Bridge Risks

The Lightchain ecosystem includes Lightchain AI mainnet and an Ethereum-based LCAI token. Risks vary depending on the network, contract, bridge, wallet, and service used. Network failures, smart contract vulnerabilities, bridge failures, or malicious attacks may interrupt services or result in loss of assets. Verify the network and official contract address before every transaction.

Replace the **governance-only token-purpose sections** with this draft:

Token Utility and Governance

LCAI is used for supported network transactions, AI-service payments, and participation in Lightchain governance. Available functions depend on the deployed protocol and the service being used. Holding LCAI does not guarantee income, investment returns, or access to future features.

Confirmation required: Legal and protocol owners should approve that utility statement. They must also replace the existing quorum, voting-cap, token-sale proceeds, and entity language with verified current facts.

2. CRITICAL — Replace the active-presale Terms - **HOLD FOR LEGAL REVIEW**

Page: <https://lightchain.ai/terms-and-conditions>

The introduction, account-registration section, payment section, and token-delivery section still describe an active presale. The page retains 2024 effective and revision dates. lightchain.ai

Replacement for the introductory paragraph:

These Terms and Conditions ("Terms") constitute a binding legal agreement between you, the user ("you," "your," or "Participant"), and **Lightchain Protocol AI** ("we," "us," or "Company"). By accessing our website or utilizing our services, you agree to comply with and be bound by these Terms. If you do not agree with any of these provisions, you must immediately discontinue all use of our platform, services, and participation in the LCAI token ecosystem.

These Terms are designed to clearly articulate the risks associated with cryptocurrency investments, define the scope of our services, and limit the liability of Lightchain Protocol AI to the fullest extent permitted by law.

Replacement for the opening of **Section 3 — Registration and Account Management:**

Delete first bullet: Provide accurate, current, and complete information during the registration process.

Some services may require an account or a connected wallet. Where account registration is required, you must provide accurate information and protect your account credentials.

Replacement for short paragraph after bullets **Section 7 — Payments, Transactions, and Staking:**

Before submitting a transaction, verify the network, recipient address, applicable fees, and service requirements. Blockchain transactions may be irreversible. Staking, bridging, and other protocol functions may have separate eligibility requirements, withdrawal conditions, and risks.

Archive Section 12 — Token Delivery Timeline from the current-service Terms, preserving historical presale obligations in an appropriately dated archive if counsel requires it.

Confirmation required: Counsel must identify the correct contracting entity, explain the relevant DUNA relationship, approve the full Terms, and set the actual effective date. These paragraphs are a drafting starting point

3. CRITICAL — Fix the homepage trading link

Page: <https://lightchain.ai/>

Location: Trading module.

The homepage still shows a "SOON" link that takes visitors to AI Chat. Update this module to direct visitors to the new LCAI purchase flow in the Lightchain Bridge.

Replace the module with:

TRADE LCAI ON>>

Remove the Kraken "soon" icon and the link to AI Chat. Replace them with a primary button labeled "Lightchain Bridge". Png attached

LIGHTCHAIN BRIDGE

Button “Alt text” “Buy LCAI through the Lightchain Bridge. The purchase flow handles the ETH exchange automatically. Review the transaction details and fees before confirming in your wallet.”

Primary button destination:

<https://bridge.lightchain.ai/>

Keep secondary Uniswap button and link

4. HIGH — Remove the pre-launch homepage announcements

Page: <https://lightchain.ai/>

Location: Community Signals.

Lightchain.ai

Replace the section introduction with:

Follow Lightchain’s mainnet activity, governance proposals, and development updates through official documentation and community channels.

Add these current cards:

Card	Exact replacement copy	Link destination
Mainnet	Explore Lightchain Mainnet — Lightchain AI mainnet is live on Chain ID 9200. View network details and connection instructions.	https://docs.lightchain.ai/docs/getting-started/mainnet/mainnet-overview.md
Network upgrade	September 22, 2026 — Slot-Time Update — The validator guide records a change to 2-second slots beginning at slot 2,017,074.	https://docs.lightchain.ai/docs/getting-started/mainnet

Card	Exact replacement copy	Link destination
Governance	Participate in Lightchain Governance — Review proposals and follow voting activity through the official DAO portal.	https://dao.lightchain.ai/

The mainnet and slot-time facts are supported by the current documentation. Lightchain AI Documentation

Do not publish a replacement liquidity-lock claim until the current lock transaction and expiry date are verified.

If by the time you get this - there is something newer, please post as appropriate.

5. HIGH — Correct slot and epoch timings

Pages:

- <https://docs.lightchain.ai/docs/getting-started/mainnet/mainnet-overview.md>
- <https://docs.lightchain.ai/docs/getting-started/mainnet>

The overview still lists 6-second slots and 36-second epochs. The validator guide records the September change to 2-second slots but retains the old epoch duration. Lightchain AI Documentation

Replace the relevant table rows with:

Item	Currently on the page	Updated data
Slot duration	6 seconds	2 seconds, from slot 2,017,074 on September 22, 2026
Genesis time	2026-05-05 12:12:02 UTC	2026-09-22 13:59:26 UTC
Epoch duration	36 seconds	12 seconds, comprising 6 slots
Active validators	66	69

The September timing change is documented in the validator guide and confirmed by the published configuration.

6. HIGH — Correct governance timing and quorum descriptions

Page: <https://docs.lightchain.ai/docs/getting-started/mainnet/governance.md>

The page translates voting blocks into durations using the old slot time. It also labels 298,989,450 LCAI as 3% of total supply, although the documented fixed supply is 10 billion. Lightchain AI Documentation

Replace the timing explanation with:

Voting delay and voting period are defined by the Governor contract. Their approximate duration depends on the current network block interval. Read the deployed contract for current parameter values and the DAO portal for each proposal's voting schedule.

Replace the quorum explanation with:

Quorum is determined by the Governor contract using its configured voting-supply basis and snapshot rules. The required voting amount may differ from a percentage of the nominal token supply. Consult the deployed contract and proposal details for the applicable quorum.

Confirmation required: Publish verified block counts, approximate durations, and the exact quorum denominator. Do not simply substitute 300 million without checking the contract.

9. HIGH — Update the Privacy Policy

Page: <https://lightchain.ai/privacy-policy>

The policy still describes presale participation and announcements, names analytics/advertising providers, and invites privacy inquiries without providing a contact address. lightchain.ai

Replacement introduction:

Change Effective Date: *Today's Date*

Keep the existing policy and make only these essential edits. Retain the remaining wording.

1. **Replace the opening paragraph:**

At Lightchain AI, we prioritize protecting your privacy and being transparent about how we collect, use, and manage your information. This Privacy Policy explains our practices when you interact with our website or services.

2. **Update the personal-data paragraph:**

Personal data includes information you provide when using our services or contacting us, such as your name, email address, wallet address, and transaction details. These details help us provide services, respond to support requests, and maintain records where required.

3. **Replace two bullets under "How We Use Your Information":**

Service Delivery: To provide requested services and facilitate interactions with the Lightchain AI ecosystem.

Marketing and Engagement: To share updates about the Lightchain AI ecosystem and other relevant information.

4. **Add this paragraph under "Data Retention and Security":**

Wallet addresses, transactions, and governance activity recorded on a public blockchain may

be publicly accessible. Public blockchain records generally cannot be deleted or altered by us. Deleting information from systems we control does not remove public blockchain records.

5. **Replace the international-transfer paragraph:**

As a globally accessible platform, Lightchain AI and its service providers may process information in countries other than your country of residence. By using our services, you consent to the transfer of your information to regions with privacy laws that may differ from those in your jurisdiction. Where required by applicable law, we use appropriate safeguards for international transfers.

Also replace “Lightchain Protocol AI” with “Lightchain AI” throughout and update the effective date when the revision is published.

One factual check is essential: confirm whether Plausible, Hotjar, and AdRoll are still used. Remove any inactive providers. If Plausible remains, remove the blanket statement that all three tools rely on cookies—Plausible’s standard analytics is cookieless. plausible.io

10. HIGH — TBD - *do we have an updated Whitepaper?*

11. HIGH — Correct mainnet navigation

Apply to the shared navigation/footer on:

- <https://lightchain.ai/>
- <https://lightchain.ai/terms-and-conditions>
- <https://lightchain.ai/risk-disclosures>
- <https://lightchain.ai/privacy-policy>

Production-facing API and verifier links still point to testnet in the retrieved footer. Lightchain.ai

Existing navigation item	Replacement label	Destination/action
API References / API Docs	Mainnet API & RPC Reference	https://docs.lightchain.ai/docs/getting-started/mainnet/mainnet-rpc-reference.md
Contract Verifier	Mainnet Contract Verifier	Use the verified mainnet verifier destination, unless testnet is there for a specific reason https://mainnet.lightscan.app/contract-verification

Existing navigation item	Replacement label	Destination/action
Faucet	Testnet Faucet	https://lightfaucet.ai/
