Lunar × Lightchain AI: Strategy Summary

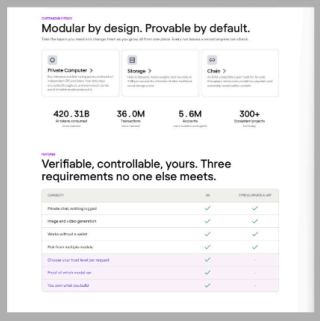

Research & Analysis
Lunar reviewed Lightchain's current presence, competitor messaging, and the experience people have when discovering the project. That work informs which audiences to prioritize, what needs clearer explanation, and how Lightchain can stand out.

Messaging & Positioning
The strategy brings our story around AI, blockchain, and community governance into a more consistent narrative. Content will connect that story to practical examples, helping people understand what they can actually do with Lightchain.

Creative Direction
The moodboard explores a more recognizable visual style across social content and web experiences. It includes examples of graphics, social layouts, and website presentation to guide the creative work. These are inspiration references, not approved final designs.

Execution & Rollout
The work is organized into phases, with content, creator activity, media coverage, and developer outreach coordinated around key milestones. We're reviewing progress with Lunar weekly, with deliverables and campaign results tracked through the shared dashboard.

Contingency Planning
The strategy includes "if–then" scenarios so we can adjust as the market provides feedback. Audience responses and campaign results will help inform changes to messaging, timing, and activities as the work progresses.

Website Updates
We've also sent the core team a prioritized list of website updates to bring the site more up to date. These focus on correcting outdated information and making it easier for visitors to find clear, accurate information about Lightchain and its ecosystem.

Creator Campaigns
The October plan calls for an initial wave of 7–10 creators, followed by another wave in November. A key content idea is to demonstrate a prompt being paid for from a wallet in Lightchain Chat, with the flat price visible. This gives audiences a concrete example of the product in use. Creator activity will be tracked so we can assess the response.

Media Relations & Educational Content
The plan includes paid placements with The Block, Decrypt, and Bitcoin.com. As the campaign develops, the approach will expand to press releases and outreach seeking earned media coverage.

It also includes two blog articles intended to improve discoverability through search engines and AI-powered answers. Where those articles will be hosted still needs to be decided.

Developer Outreach
Lunar plans to contact more than 300 developers from its Espressio database in four batches. This gives outreach a staged rollout, with messaging aimed at introducing Lightchain and encouraging developers to explore the ecosystem.

Community Engagement & Usage
Lunar plans to roll out community-driven activities that encourage people to explore and use Lightchain. These activities will connect education and conversation with practical participation, giving community members opportunities to try the products, share their experiences, and provide feedback.

Community & Announcement Coordination
Community activity is part of the wider plan. On our side, we're also working to establish an announcement handoff with the core team so Lunar has the context and lead time to prepare supporting content. The proposed approach would let Lunar's marketing posts introduce announcements and direct people toward detailed instructions and official information. That coordination still needs to be finalized..

Keeping the Community Informed
A community-facing dashboard is being prepared to make progress easier to follow, supported by weekly status updates. The plan also includes Lunar participating in Discord chat and content creators joining the conversation. This will give community members more opportunities to ask questions, offer feedback, and engage directly with the people supporting the campaign.

The goal across these activities is to connect awareness with something useful: a product demonstration, a clearer explanation, or a path into the ecosystem.

We'll share updates as the work develops. Please keep bringing ideas, questions, and concerns to the marketing channel!
