

Authorize Lunar Strategy Ecosystem Growth Engagement (SOW LCAI-001) and Interim Marketing Point of Contact

Summary

This proposal authorizes the LCAI DUNA to engage Lunar Strategy under the LCAI DUNA Master Services Agreement and Statement of Work LCAI-001 (Ecosystem Growth Initiative) for a six-month, proof-first marketing and growth program. This text is a summary of that engagement. The SOW is the controlling scope, and voters are encouraged to read the full SOW before voting.

The engagement is recommended by the Lightchain AI Marketing Partner Recommendation. Its purpose is to convert technical progress into measurable adoption and visibility — developer adoption, partners, community participation, and market awareness of Lightchain’s actual story — not short-term hype and not a KOL-only campaign.

The Statement of Work allocates effort, not a rigid split of cash, across owned content and proof (30%), creator distribution (25%), PR and earned media (15%), community (15%), developer ecosystem (10%), and partnerships and advisory (5%). Creator / KOL work is 25% of program effort, not 25% of total spend. The \$10,000 monthly third-party budget is allocated among creators, PR/distribution, developer outreach, and comparable third-party costs as results require, within the SOW rules.

The term is six months, with a hard Month-3 review window. After Month 3, the DAO may cancel the remainder of the engagement by a passed proposal during a fifteen-calendar-day review period with no additional notice to Lunar and no termination penalty. If the DAO does not pass a cancellation proposal in that window, the engagement continues under the same terms for the remaining three months. After Month 3, the DAO may also terminate at any time on fifteen (15) days’ written notice to Lunar.

This proposal names Discord user Cville (cheville.23) as the Designated Community Point of Contact (POC) for the Lunar engagement. A separate proposal will formalize an open Marketing Committee and the Select Marketing Team (MT). The MT will be used to handle items under NDA or of a competitive or sensitive nature. This proposal does not name or appoint MT members.

Upon passage, the DAO authorizes and directs the Ministerial Agent of the LCAI DUNA to execute the LCAI DUNA Master Services Agreement and Statement of Work LCAI-001 v1.1 with Lunar Strategy on behalf of the Association. The POC does not sign those agreements.

This proposal includes an on-chain Governor action to transfer native LCAI from the Treasury to the DUNA Payment Clearing House multi-sig at `{PAYMENT_CLEARING_HOUSE_MULTISIG_ADDRESS}`. Those LCAI remain DUNA assets and stay native coins in the wallet. Only the amount of LCAI required to pay each validated monthly

invoice is swapped to USDC, and only when that invoice is due. The rest of the balance is not pre-converted. The purpose is to minimize the market impact of swaps on the LCAI price: swap only what is needed, when it is needed.

Motivation

Lightchain has built meaningful technical foundations. The next challenge is to make the project easier for developers, users, partners, and the broader market to understand, evaluate, and adopt.

Community-led efforts have maintained awareness and demonstrated commitment, but they have operated without the coordinated resources, measurement, PR relationships, and sustained execution of a professional campaign. Exchange conditions have also changed. Future listings require coordinated narrative support, credible proof points, community participation, and sustained visibility. A listing alone does not guarantee lasting market interest.

The Marketing Committee evaluated firms on relevant experience, strategic approach, team capacity, execution process, proposal quality, measurement capabilities, commercial structure, and risk. The recommendation was based on overall strategic fit and execution capability, not simply cost. Monthly / milestone-gated terms were prioritized to reduce upfront treasury pressure, limit concentrated token sales, and allow performance to be reviewed throughout the engagement.

Lunar Strategy was recommended as the partner with the strongest overall combination of crypto-sector experience, strategic fit, team capability, integrated execution, and workable commercial terms.

What success looks like (strategic ambitions, not agency guarantees):

- Translate technical progress into stronger adoption, visibility, market participation, and ecosystem growth.
- Expand developer activity, community awareness, partner interest, and market visibility while building a stronger foundation for liquidity and future exchange opportunities.
- Increase active builders, deployed projects, ecosystem partnerships, qualified community participation, and earned media visibility.
- Establish clear baselines early so campaign progress can be reported credibly.

- Generate measurable trading activity around new listings, with emphasis on sustained volume rather than temporary listing spikes.

Market rank, price, and volume are strategic ambitions. Lunar will be evaluated primarily on the measurable activities and outcomes it can directly influence, as defined in the SOW.

Core principle. Success means making Lightchain easier to understand, trust, build on, and participate in — then proving that progress through measurable results.

What this engagement is — and is not

This is a six-month ecosystem growth program with three primary tracks and supporting workstreams:

1. Social engine — always-on X presence built on what actually shipped; measured in smart followers rather than raw follower count.
2. Creator distribution — vetted voices briefed on one story (Lightchain's proof), run on Lunar's Creator Wire rails.
3. Community — Discord and Telegram support covering onboarding, engagement, recurring activities, and moderation, with Lightchain retaining ownership and administrative control of its Discord.
4. Supporting workstreams — PR and earned media pitched on live, verifiable milestones; developer ecosystem onboarding and outreach; listing playbooks, positioning, and warm introductions.

Primary goals, in order of program intent:

- Build developer adoption.
- Build partners and listing / institutional readiness grounded in proof.
- Strengthen community and governance participation.
- Increase market awareness by telling Lightchain's actual story — published proof first, distribution second.

The program does not buy reach as a core deliverable. Exchange listing fees, market-making fees, legal, audit, token or treasury services, and any exchange or protocol costs remain excluded and require separate DAO authorization where applicable.

All public messaging under this SOW comes from the protocol and the DAO. There is no company CEO voice behind Lightchain AI.

Commercial terms the DAO is authorizing

Highlights only. Full commercial detail is in SOW LCAI-001 v1.1 and the LCAI DUNA Master Services Agreement.

- Partner: Lunar Strategy
- Agreements: LCAI DUNA Master Services Agreement and SOW LCAI-001 v1.1
- Term: six months from kickoff; three-month minimum
- Monthly retainer: \$24,500 USDC (\$14,500 Lunar fee + \$10,000 third-party budget)
- Six-month ceiling: \$147,000 USDC
- Pay Lunar in USDC monthly in advance against a POC-validated invoice
- Add-ons and any increase above these amounts require a separate DAO-passed proposal

Effort allocation

This is a split of program effort, not of cash.

- 30% owned content and proof
- 25% creator distribution
- 15% PR and earned media
- 15% community
- 10% developer ecosystem
- 5% partnerships and advisory

A major change from this mix requires a DAO-passed proposal. Detail is in the SOW.

Funding

- This proposal transfers native LCAI to the Payment Clearing House multi-sig in the amount of {LCAI_AMOUNT}
- Only LCAI needed to pay each validated invoice is swapped to USDC; the remaining wallet balance stays native
- Unused LCAI and USDC stay DUNA assets and return to the Treasury at the end of the engagement or on termination

Multi-sig payment rules

The signers of the Payment Clearing House multi-sig will hold, convert, and disburse the transferred LCAI only under these rules:

1. Lunar invoices monthly, in USDC, not to exceed \$24,500 unless a DAO-passed Change Order says otherwise. The invoice must include the USDC amount and the Lunar wallet address that is to receive payment.
2. The POC reviews the invoice against the SOW (amount, period, and that the engagement is still active). If valid, the POC informs the multi-sig signers that the invoice is approved for payment.

3. After POC validation, the signers may swap native LCAI for USDC in an amount sufficient to cover that single invoice only.
4. The signers pay the validated invoice in USDC from the multi-sig to the wallet address Lunar provided on that invoice.
5. After payment, the signers (or the POC on their behalf) inform the DUNA that payment has been made, including invoice period, USDC amount paid, Lunar receiving address, LCAI quantity swapped, and transaction hash(es).
6. Signers shall not transfer these LCAI or resulting USDC to any other destination except to the Lunar wallet for a validated Lunar invoice or return of unused assets to the Treasury.
7. If the engagement is terminated under the exit strategy, signers shall make no further conversions or Lunar payments except for amounts then due for services already delivered and third-party commitments already made in good faith, and only against a POC-validated invoice.

Exit strategy — Month-3 review, continuation default, and cancellation

1. Six-month project from kickoff, matching the three-phase plan in SOW §8.
2. Month-3 evaluation against this SOW, with reported data in hand.
3. Following completion of Month 3, a fifteen (15) calendar-day review period allows the DAO to review performance and vote on whether to terminate. During this period, Lunar pauses paid campaign activity and new third-party spending while continuing content delivery under the agreed scope at no additional fee.
4. Cancel in that window by passed proposal, with no extra notice to Lunar and no termination fee. Unused-funds return and handoff obligations remain in effect.
5. If the DAO does not pass a cancellation proposal by the end of the review period, the engagement continues the remaining three months under the same terms.
6. After Month 3, the DAO may also cancel at any time with 15 days' written notice to Lunar.
7. No automatic renewal. Any extension requires a new DAO proposal and Change Order.

Measurement

Proof metrics come first; distribution metrics second. Baselines are set at kickoff. Lunar reports what happened, not what it hoped.

Key Performance Indicators (SOW §11.2)

- On-chain usage and active wallets — transactions and activity on mainnet; growth in real, using addresses
- Governance participation — proposals, voters, and turnout
- Developer funnel — docs to testnet to shipped app, through to third-party GitHub growth

- Smart reach, share of voice, and sentiment — quality reach from vetted voices rather than bought impressions; Lightchain against its category; how often the market calls Lightchain delivering versus delayed
- Cost per vetted placement / per qualified creator post
- Percent of creator content that includes a correct CTA (docs, testnet, vote, app)
- Repeat creators vs one-off spam
- Follow-through — clicks or on-chain spikes in a 7-day window after a drop (directional, not perfect)
- Listing / market-presence hygiene — quality press coverage around listings; whether listings are discussed as live vs rumored; correction rate on false listing or delay claims

Measurement definitions (SOW §11.3)

- **Smart Follower:** a new follower whose account appears authentic and active and shows a reasonable likelihood of genuine interest in blockchain, artificial intelligence, Web3 development, digital assets, or Lightchain AI. Accounts with material indicators of bot activity, purchased following, spam, or coordinated engagement manipulation will be excluded where reasonably identifiable.
- **Qualified Engagement:** a substantive interaction by an authentic account in a relevant target audience, including meaningful comments, replies, reposts with commentary, saves, link clicks, direct inquiries, governance participation, or similar actions beyond passive viewing. Generic, automated, duplicated, irrelevant, or suspected artificial interactions will be excluded where reasonably identifiable.
- **Active Wallet:** a unique wallet address completing at least one genuine, non-automated transaction or other agreed qualifying on-chain action during the reporting period. Known test, system-generated, duplicate, incentive-farming, and team-controlled activity will be identified or excluded where reasonably possible.
- **Qualified Developer:** an authentic developer or development team with relevant technical capability that completes a measurable action indicating interest in building on Lightchain, such as reviewing technical documentation, joining an official builder channel, attending a technical session, requesting development support, beginning testnet activity, creating a relevant repository, or submitting a project proposal. Passive impressions and unverified outreach contacts will not qualify.
- **Active Community Member:** a unique, authentic community member completing at least one substantive action during the reporting period, such as contributing to a discussion, attending an event, participating in governance, completing an onboarding activity, providing community support, or contributing to a community initiative. Reactions alone, automated messages, and suspected bot activity will be excluded.
- **Qualified Creator Post:** content published by an approved creator that complies with the approved brief; is relevant to the campaign objective; includes accurate messaging, required disclosures, and any required call to action; passes agreed audience-

authenticity and engagement-quality checks; and remains publicly accessible for the agreed period.

- Invalid or Artificial Engagement: engagement reasonably believed to result from bots, click farms, purchased followers or interactions, engagement pods, automated activity, coordinated manipulation, irrelevant mass responses, or other behavior that does not represent genuine audience interest. Such engagement will be excluded from reported performance and creator-payment calculations where reasonably identifiable.
- Attributed Action: a measurable action reasonably connected to a specific campaign, creator post, or piece of content through tracked links, referral data, campaign codes, platform analytics, or another agreed attribution method. Lunar will identify whether a reported result is directly attributed or only directional.
- Earned Media: editorial, interview, podcast, or other media coverage obtained through independent editorial interest without payment to the publisher, journalist, host, or other party as a condition of publication or participation.
- Paid Media Placement: an article, interview, podcast appearance, or other exposure for which publication or participation requires payment. Paid placements must be disclosed to the DUNA and identified as paid or sponsored whenever required by applicable law, platform rules, or publisher policy.
- Reporting cadence: weekly check-in with the POC; live Creator Wire dashboard; monthly written report published so the whole DAO can read it.

Conditions for a credible launch:

- Confirm technical and operational claims with the Lightchain technical team before publication.
- Agree baselines, KPI definitions, reporting cadence, and data sources before campaign work begins.
- Keep community communications factual about what marketing can and cannot control.
- Preserve community participation and oversight throughout the engagement.

Official X account access

This proposal authorizes limited, campaign-duration access to Lightchain AI's official X account so the program can publish and engage as required by the SOW. This access is additive to the existing core-team administration of the official Lightchain AI X account. It does not replace the core team and does not transfer ownership.

- The current X account owner remains the owner.
- The POC is authorized as an additional X admin, not an owner.
- Lunar Strategy is authorized as an X contributor for content management under this SOW.
- Comments and responses on X will be allowed on all official posts published under this program.

- Access is issued by the current X owner through X Delegate / Teams invitations to the POC's own X account as Admin and to Lunar's designated X account(s) as Contributor. No shared password for the official Lightchain account will be issued.
- That access remains active only while this campaign is active. It shall be revoked at the end of the engagement, on termination under the exit strategy, or earlier if the DAO or the current X owner so directs.

What this proposal authorizes

1. Adopt SOW LCAI-001 as an authorized engagement of the LCAI DUNA, governed by the LCAI DUNA Master Services Agreement.
2. Direct the Ministerial Agent to execute those published agreements on behalf of the Association. Passage is the DAO's authorization and digital acceptance. The Ministerial Agent may not vary commercial terms, raise the \$147,000 ceiling, or bind SOW §15 additions without a further DAO-passed proposal.
3. Perform the six-month engagement within the commercial terms, effort allocation, funding, multi-sig payment rules, and exit strategy stated above.
4. Execute the Governor transfer of {LCAI_AMOUNT} native LCAI from the Treasury to {PAYMENT_CLEARING_HOUSE_MULTISIG_ADDRESS}.
5. Name Cville (cheville.23) as Designated Community Point of Contact.
6. Authorize the campaign-duration X access stated above.
7. Require a separate proposal to formalize the open Marketing Committee and Select Marketing Team.

What this proposal does not authorize

- Spend above the SOW retainer and third-party caps
- Direct Treasury payment to Lunar
- Conversion of the full LCAI balance to USDC in advance, or conversion for any purpose other than a POC-validated monthly invoice
- Transfer of these funds from the multi-sig to any destination other than Lunar's invoiced wallet or return to the Treasury
- Naming of Payment Clearing House multi-sig signers
- Naming or appointment of Select Marketing Team members
- The POC signing the MSA or SOW
- Bought reach beyond the SOW's included X ad-credit management
- Binding listing agreements, listing fees, or market-making arrangements
- Transfer of official X account ownership, or X access that outlasts this campaign
- Identity disclosure of DAO members
- Changes to the DUNA Agreement or Governing Principles

Vote

For: authorize the engagement on the terms above.

Against: do not authorize the engagement, the execution direction, the Treasury transfer, or the POC designation.

Abstain: record participation without supporting or opposing.

On-chain action

- Target: LCAI DUNA Treasury
- Method: native LCAI transfer
- Recipient: {PAYMENT_CLEARING_HOUSE_MULTISIG_ADDRESS}
- Asset: native LCAI
- Amount: {LCAI_AMOUNT}
